### IV. Read the passage and then tick T (True) or F (False)

There are three major forms of fossil fuels: coal, oil and natural gas. All three were formed many hundreds of millions of years ago before the time of the dinosaurs – therefore we call them fossil fuels.

Fossil fuels take millions of years to make. But they are not unlimited. We are using up the fuels that were made more than 300 million years ago. They are not

renewable like solar power, wind power, hydro power.

We can save fossil fuels by conserving energy. One simple way to do this is to turn off appliances, TVs and radios that we are not using. We can also turn off lights when no one is in the room. Another way is to go by bike or walk instead of driving cars or motorbikes.

<b>Statements</b>	<b>T</b>	<b>F</b>
1. Three major forms of fossil fuels are oil, coal and natural gas.		
2. They were formed right after the time of dinosaurs.		
3. Fossil fuels are limited.		
4. Hydro power and solar power are non-renewable sources.		
5. Conserving energy is a good way to save fossil fuels.		

**V. Read the passage again and answer the questions**

**HUNGER**

Hunger has become a serious problem in many parts of the world.

The first cause of hunger is the fast growth of population. The Earth is no longer able to feed its more than seven billion people. There is not enough land for growing food.

The change of climate also brings to the Earth more weather-related disasters such as storms and droughts ... They heavily destroy crops.

Wars are still happening. People are fighting, or running away from home. There's nobody to work on the field or in the factory to produce food.

Technology is working hard to help solve part of this problem. In the future, we will have warning systems to reduce the loss from natural disasters. Low-cost means of transport will also be used to carry food to area-in-need.

16. What is a serious problem in many parts of the world?

.....

17. How many people are there in the world?

**VI. Read then choose A, B, or C**

We can use renewable and non-renewable energy sources to make electricity.

Most of our electricity comes from power stations that use fossil fuels like coal, oil and gas. We call them non-renewable sources because they will eventually run out. Unfortunately, burning fossil fuels produces lots of greenhouse gases which cause global warming.

We also use renewable energy sources like the sun, wind and water to make electricity. We can use them again and again because they cannot run out. They do not produce greenhouse gases so they are much less harmful to the environment.
